

SURPRISE TRANSPORTATION MASTER PLAN

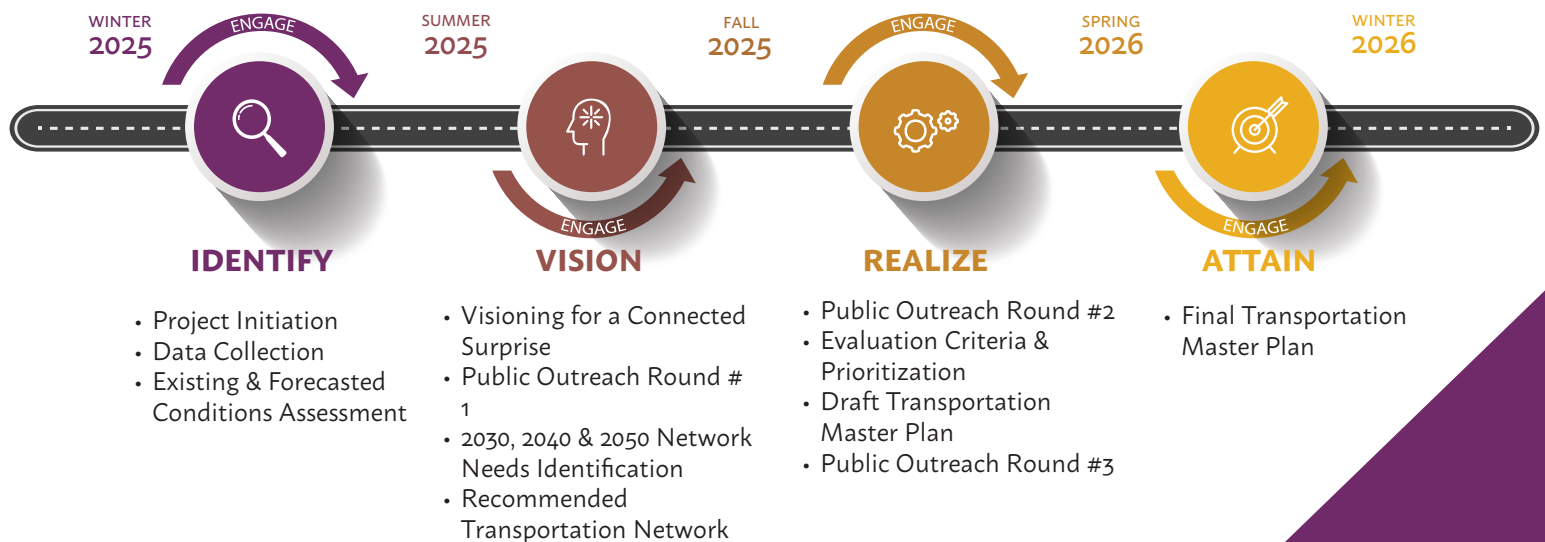

PROJECT FACT SHEET

The Transportation Master Plan (TMP) is designed to guide the development of a safe, efficient and connected transportation network that supports the city's growth through 2050.

The TMP evaluates existing infrastructure and future needs across all modes of transportation — including roadways, public transit, walking, and biking — and aligns them with projected development, population and employment trends. This analysis will be used to prioritize currently planned projects and identify new multimodal strategies to address gaps in mobility, safety, and accessibility in the planning area (see map).

The planning process includes multiple phases and robust public engagement opportunities to ensure the plan reflects the needs and vision of Surprise residents.

Scan the QR code to visit the Surprise TMP website, where you can explore detailed project information, sign up for updates, access technical documents, and participate in digital engagement activities — including online surveys, interactive mapping tools, and virtual community meetings.
